

Suntory Group Nature Positive Declaration

As a company dedicated “To inspire the brilliance of life by creating rich experiences for people, in harmony with nature,” Suntory Group commits to active efforts in nature restoration in order to realize a sustainable society that coexists with nature. “Suntory Group Environmental Principles” emphasizes the importance of conserving and restoring biodiversity through activities such as water source conservation and transitioning to sustainable agriculture. This is critical for protecting ecosystems, including water sources and agricultural areas, which are essential to us as a company that relies on water and agricultural products.

Suntory Group's Nature Positive Action

Suntory Group collaborates with diverse stakeholders to drive initiatives that support a nature-positive future.

1. Engagement

We promote initiatives that contribute to the realization of Nature Positive, in line with the global biodiversity goals outlined in the "Kunming-Montreal Global Biodiversity Framework."

2. Water Source Conservation/ Restoring Biodiversity

To ensure the safety, security, and sustainability of high quality groundwater, we cooperate with local communities and experts from various fields to conserve and restore forests and biodiversity in the water source areas of our production plants.

3. Sustainable Land Use

In the upstream supply chain, we depend on natural functions such as groundwater and surface water, pollination, soil fertility, healthy water cycle, water quality maintenance, prevention of soil erosion, pest control, and disaster mitigation. As a company that relies on the gifts of nature, we promote the conservation of biodiversity in agricultural systems through regenerative agriculture and other initiatives that enhance soil biodiversity.

4. Circular Economy Initiatives

In addition to water and agricultural systems, to effectively reduce waste and efficiently utilize limited resources, we imbed sustainable principles throughout the lifecycle of our products, promote the 3Rs (reduce, reuse, recycle) for all raw materials, use renewable resources when available, and collaborate with stakeholders to build a fundamentally circular system.

5. Bird Conservation Activities

Wild birds are considered to be indicators of the natural environment. Suntory Group has advocated that protecting birds leads to protecting human beings and the natural environment and started its bird conservation activities in 1973. We have been sharing the importance of bird conservation and will continue these efforts moving forward.
